

Administering and Configuring Security in Power BI

Agenda

- User Authentication and Identity
- Power BI Tenant Administration
- Data Security
- Row Level Security
- Dynamic Row Level Security

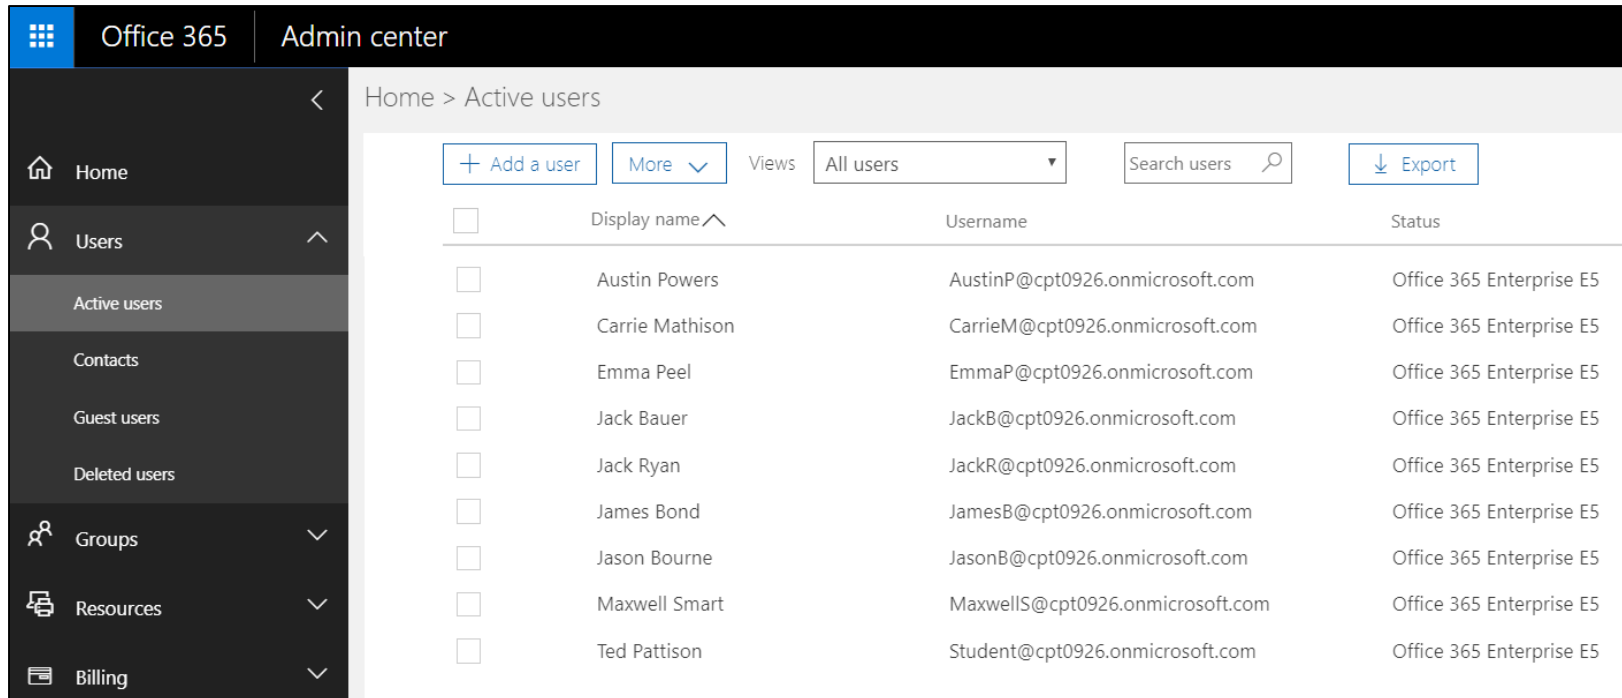

Power BI Built on Azure Active Directory

- Azure AD manages identity in Microsoft cloud
 - Organization creates user accounts & groups in Azure AD
 - Users accounts and groups created in scope of tenant
 - Azure AD provides user authentication service
- Azure AD manages licensing and permissions
 - Provides users authorized access to Office 365
 - Provides users authorized access to SharePoint Online
 - Provides users authorized access to Dynamics 365
 - Provides users authorized access to Power BI

Azure AD User Accounts and Licensing

- User account created within scope of tenant
 - Office 365 admin create accounts and assigns licenses

The screenshot shows the Office 365 Admin center interface. The left sidebar contains navigation links: Home, Users, Active users (selected), Contacts, Guest users, Deleted users, Groups, Resources, and Billing. The main content area is titled 'Home > Active users'. It includes a '+ Add a user' button, a 'More' dropdown, a 'Views' dropdown set to 'All users', a 'Search users' search bar, and an 'Export' button. Below these controls is a table of active users.

<input type="checkbox"/>	Display name ^	Username	Status
<input type="checkbox"/>	Austin Powers	AustinP@cpt0926.onmicrosoft.com	Office 365 Enterprise E5

<input type="checkbox"/>	Ted Pattison	Student@cpt0926.onmicrosoft.com	Office 365 Enterprise E5

Multifactor Authentication

- Enabled through admin portal
 - Requires Office 365 or Azure AD Premium

multi-factor authentication

users service settings

Note: only users licensed to use Microsoft Online Services are eligible for Multi-Factor Authentication. [Learn more about how to license other users.](#)
Before you begin, take a look at the [multi-factor auth deployment guide](#).

Agenda

- ✓ User Authentication and Identity
- Power BI Tenant Administration
 - Data Security
 - Row Level Security
 - Dynamic Row Level Security

Power BI Admin Portal

- Power BI Admins control tenant-level settings
 - Control whether users can self-register for Power BI
 - Control who can publish to web
 - Control who can export & share content
 - Control who can create content packs

A screenshot of the Power BI Admin Portal 'Export and sharing settings' page. The page is divided into two main sections: a left sidebar and a main content area. The sidebar, titled 'Admin portal', contains links to 'Usage Metrics', 'Users', 'Audit logs', 'Tenant settings' (which is highlighted), and 'Capacity settings'. The main content area, titled 'Export and sharing settings', lists several settings: 'Share content with external users' (Enabled for the entire organization), 'Publish to web' (Enabled for the entire organization), 'Export data' (Enabled for a subset of the organization), 'Export reports as PowerPoint presentations' (Enabled for the entire organization), and 'Print dashboards and reports' (Enabled for the entire organization). A red arrow points from the 'Export data' setting to a detailed configuration panel on the right. This panel shows the 'Export data' settings, including a toggle switch for 'Export data' (set to 'Enabled'), a section for 'Apply to:' with radio buttons for 'The entire organization' and 'Specific security groups' (selected), a text input field containing 'Wingtip Sales Reps' and 'Enter security groups', and a checkbox for 'Except specific security groups'. At the bottom of the panel are 'Apply' and 'Cancel' buttons.

Agenda

- ✓ User Authentication and Identity
- ✓ Power BI Tenant Administration
- Data Security
 - Row Level Security
 - Dynamic Row Level Security

Types of Data

- Imported Data (aka ETL Data)
 - Data cached in Power BI and refreshed using saved credentials
- Live Connection or Direct Query
 - Data pulled into Power BI at query time using saved credentials
- Pushed Data
 - Data pushed into Power BI by external application

Power BI Data Encryption

- Data can be ***In Transit***
 - Moving between data source, Power BI and client
 - Data is always encrypted using HTTPS or Azure Service Bus
- Data can be ***At Rest***
 - Data stored in cloud-based storage
 - Data encrypted using internally managed encryption keys

Storage of Data At Rest

- What types of data must be stored at rest?
 - Data (i.e. Dataset)
 - Credentials
 - Metadata for report and dashboard layouts

Data source	Data	Metadata	Credentials
Imported Data	Azure Blob Storage	Azure Blob Storage	Azure SQL
Direct Query	Nothing	Azure Blob Storage	Azure SQL
Live Connection	Nothing	Azure Blob Storage	Azure SQL
Push Dataset	Azure SQL	Azure Blob Storage	N/A

Data Encryption

- Power BI uses encryption keys for blob storage
 - Keys stored in separate location from Power BI service
 - Fully managed by internal Microsoft service
- Azure SQL manages encryption internally
 - Power BI relies on Azure SQL TDE Technology
 - Used to encrypt credentials to cloud-based sources
- For credentials to access on-premises sources
 - Encryption key created in on-premises data gateway
 - Encryption key used to encrypt creds stored in cloud

Agenda

- ✓ User Authentication and Identity
- ✓ Power BI Tenant Administration
- ✓ Data Security
 - Row Level Security
 - Dynamic Row Level Security

What Is Row-level Security (RLS)

- Security Scheme based on Named Roles
 - Roles are defined using Power BI Desktop
 - Each role is scoped to the dataset within a PBIX project
- Role defined using one or more DAX expressions
 - DAX expressions restrict which rows are accessible

Common RLS Scenario

Configuring RLS in the Power BI Desktop

Manage roles

Roles

- All Sales Regions ...
- Central Sales Region ...
- Eastern Sales Region ...
- Western Sales Region ...**

Create Delete

Tables

- Calendar ...
- Customers ...**
- Products ...
- Purchases ...
- Sales ...
- SalesRegions ...

Table filter DAX expression

[Sales Region] = "Western Region"

Filter the data that this role can see by entering a DAX filter expression that returns a True/False value. For example: [Entity ID] = "Value"

Save Cancel

Configuring RLS in the Power BI Service

Configuring Row-level Security

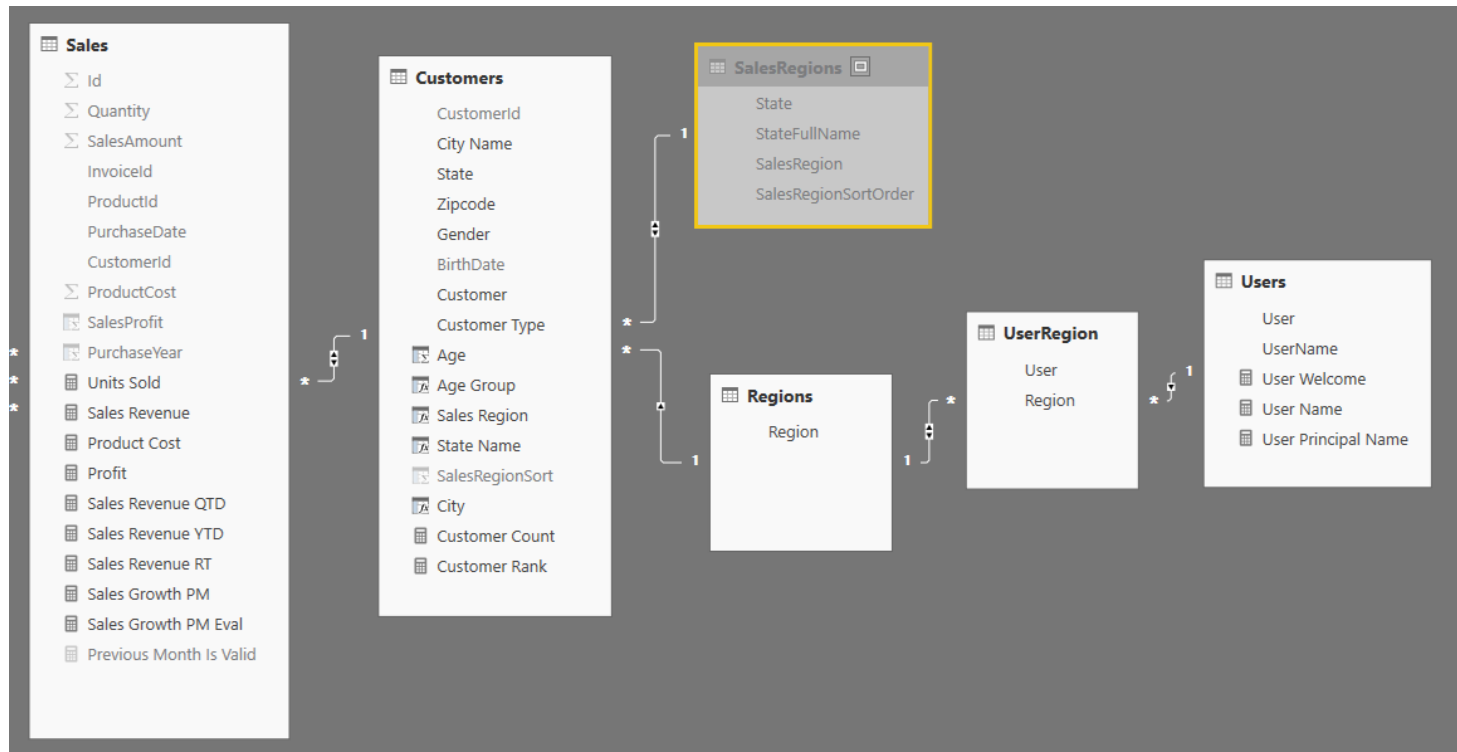

Agenda

- ✓ User Authentication and Identity
- ✓ Power BI Tenant Administration
- ✓ Data Security
- ✓ Row Level Security
- Dynamic Row Level Security

Dynamic RLS

- Design pattern for data-driven security
 - RLS set up to use login name of current user
 - Permission assignments are included as part of dataset
 - Implemented using bi-directional cross-filtering

Configuring Cross-direction Filtering

The diagram illustrates a database schema with the following tables and attributes:

- Customers**: BirthDate, Customer, Customer Type, Age, Age Group, Sales Region, State Name, SalesRegionSort, City, Customer Count, Customer Rank.
- Regions**: Region.
- UserRegion**: User, Region.
- Users**: User, UserName, User Welcome, User Name, User Principal Name.

Relationships are shown with cardinalities: Customers (1) to Regions (*), Regions (1) to UserRegion (*), and UserRegion (1) to Users (*).

A red arrow points from the UserRegion relationship to the configuration dialog box below.

UserRegion Configuration Dialog

Relationship: UserRegion

User	Region
EmmaP@cpt0926.onmicrosoft.com	Central Region
JackB@cpt0926.onmicrosoft.com	Central Region
MaxwellS@cpt0926.onmicrosoft.com	Central Region

Regions

Region
Western Region
Central Region
Eastern Region

Cardinality: Many to one (*:1)

☒ Make this relationship active
☐ Assume referential integrity

Cross filter direction: Both

☒ Apply security filter in both directions

OK Cancel

All Users Must Be Added To a Role

The screenshot shows the Power BI interface for configuring Row-Level Security (RLS). The top navigation bar includes the Power BI logo, a workspace icon labeled 'ws', and the breadcrumb 'Wingtip Sales Dynamic RLS > Row-Level Security'. The left sidebar contains navigation options: Favorites, Recent, Apps, Shared with me, Workspaces, and the active workspace 'Wingtip Sales Dynamic RLS'. The main content area is titled 'Row-Level Security' and is divided into two panels. The left panel, 'Dynamic RLS Role (1)', is currently empty. The right panel, 'Members (1)', shows the list of users assigned to the role. It includes a text input field labeled 'Enter email addresses' and an 'Add' button. Below the input field, the user 'Wingtip Sales Reps' is listed with a close icon (X) to its right.
