# Designing a Data Model with Power BI Desktop

Agenda

- Creating Dimensional Hierarchies
- Understanding Evaluation Context and Calculate
- Creating a Calendar Table
- Calling DAX Time Intelligence Functions
- Writing Contextually-aware DAX Expressions
- Calculating the Top 5 Products

Dimensional Hierarchies

- Hierarchy created from two or more columns
  - All columns in hierarchy must be from the same table
  - Defines parent-child relationship between columns
  - Provides path to navigate through data
 - Provides path to drill down into greater level of detail
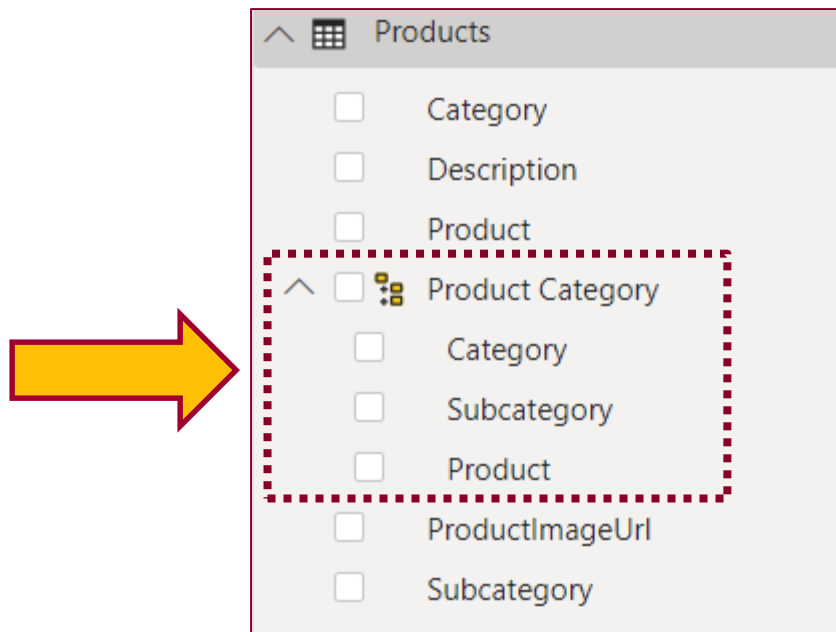

Pulling Columns for Hierarchy into Single Table

- Sometimes hierarchy columns are spread across tables
  - Use RELATED function from DAX to pull columns into single table

  - Then create hierarchy in the table with all the columns

Agenda

- ✓ Creating Dimensional Hierarchies
- ➢ Understanding Evaluation Context and Calculate
- Creating a Calendar Table
- Calling DAX Time Intelligence Functions
- Writing Contextually-aware DAX Expressions
- Calculating the Top 5 Products

A Tale of Two Evaluation Contexts

- Row Context
  - Context includes all columns in iteration of current row
  - Used to evaluate DAX expression in calculated column
  - Only available in measures with iterator function (e.g. SUMX)

- Filter Context
  - Context includes filter(s) defining current set of rows
  - Used by default to evaluate DAX expressions in measures
  - Can be fully ignored or partially ignored using DAX code
  - Not used to evaluate DAX in calculated columns

Understanding Row Context
- Row context used to evaluate calculated columns

```
City = [City Name] & ", " & [State]
```

	Age Group	Sales Region	State Name	SalesRegionSort	City
48	Ages 40 TO 49	Western Region	California	1	San Jose, CA
74	Ages 65 and over	Western Region	California	1	San Jose, CA
73	Ages 65 and over	Western Region	California	1	San Jose, CA
25	Ages 18 TO 23	Western Region	California	1	San Jose, CA
61	Ages 50 TO 65	Western Region	California	1	San Jose, CA
65	Ages 65 and over	Western Region	California	1	San Jose, CA

```
Age = Floor( (TODAY()-Customers[BirthDate])/365, 1)
```

| Customer	Customer Type	Age	Age Group	Sales Region	State Name
Lucile Blake	One-time Customer	48	Ages 40 TO 49	Western Region	California
Rochelle Owen	One-time Customer	74	Ages 65 and over	Western Region	California
Corinne Finch	One-time Customer	73	Ages 65 and over	Western Region	California

Understanding Iterators Like SUMX

- Standard aggregation functions (e.g. SUM) have no row context
  - You can use SUM to sum values of a single column
  - You cannot use SUM to sum results of an expressions

```
× ✓   Gross Margin = SUM( Sales[SalesAmount]-Sales[ProductCost] )
      ⚠ The SUM function only accepts a column reference as an argument.
```

- Iterator functions (e.g. SUMX) iterate through rows in target table

```
× ✓   Gross Margin = SUMX(Sales, Sales[SalesAmount]-Sales[ProductCost] )
```

  - First argument accepts expressions that evaluates to table of rows
  - Second argument accepts expression that is evaluated for each row

Understanding Filter Context

- ## Visuals apply various filters in different evaluation contexts

Month in Year	2012	2013	2014	2015	Total
Jan	$3,063	$307,182	$629,969	$959,863	$1,900,077
Feb	$33,218	$291,942	$609,637	$969,330	$1,904,126
Mar	$49,213	$346,186	$628,618	$675,533	$1,699,551
Apr	$40,434	$380,869	$661,588	$722,456	$1,805,347
May	$83,840	$377,376	$748,193	$698,311	$1,907,720
Jun	$136,670	$353,586	$814,333	$785,793	$2,090,382
Jul	$144,244	$391,202	$788,469	$921,994	$2,245,908
Aug	$197,952	$476,884	$869,143	$1,084,189	$2,628,168
Sep	$215,097	$504,532	$890,958	$1,088,863	$2,699,449
Oct	$239,513	$577,439	$988,789	$1,211,810	$3,017,551
Nov	$376,503	$579,507	$999,574	$1,305,029	$3,260,613
Dec	$424,240	$769,473	$1,644,980	$1,732,932	$4,571,625
Total	$1,943,986	$5,356,177	$10,274,251	$12,156,103	$29,730,517

Filters on this evaluation

[Year] = 2015

[Month in Year] = "October"

- ## Filter context also affected by slicers and other filters

Sales Region
- ■ Western Region
- ☐ Central Region
- ☐ Eastern Region

Customer Type
- ☐ One-time Customer
- ■ Repeat Customer

Month in Year	2012	2013	2014	2015	Total
Jan		$117,712	$202,751	$182,616	$503,079
Feb	$8,264	$126,522	$181,564	$184,674	$501,024
Mar	$22,434	$148,668	$160,857	$169,933	$501,892
Apr	$22,235	$178,506	$183,987	$194,197	$578,925
May	$36,719	$169,582	$210,150	$173,661	$590,112
Jun	$55,119	$158,668	$217,947	$196,431	$628,166
Jul	$72,823	$187,093	$233,333	$193,830	$687,079
Aug	$90,917	$169,789	$233,101	$209,895	$703,703
Sep	$77,898	$155,469	$225,287	$213,017	$671,672
Oct	$84,735	$208,700	$197,377	$207,227	$698,039
Nov	$130,678	$168,821	$227,856	$190,144	$717,498
Dec	$147,043	$203,781	$234,393	$195,796	$781,013
Total	$748,866	$1,993,312	$2,508,601	$2,311,421	$7,562,200

Filters on this evaluation

[Year] = 2015

[Month in Year] = "October"

[Sales Region] = "Western Region"

[Customer Type] = "Repeat Customer"

Using the CALCULATE Function

- CALCULATE function provides greatest amount of control
  - First argument defines expression to evaluate
  - Second argument defines table on which to evaluate expression
  - You can evaluate expressions with or without current filter context

```
Pct of All Products =
DIVIDE(
    SUM( Sales[SalesAmount] ),
    CALCULATE(
        Sum (Sales[SalesAmount] ),
        ALL(Products[Category], Products[Subcategory], Products[Product])
    )
)
```

```
Pct of Product Category =
DIVIDE(
    SUM( Sales[SalesAmount] ),
    CALCULATE(
        Sum (Sales[SalesAmount] ),
        ALL( Products[Subcategory], Products[Product] )
    )
)
```

Agenda

- ✓ Creating Dimensional Hierarchies
- ✓ Understanding Evaluation Context and Calculate
- ➢ Creating a Calendar Table
- Calling DAX Time Intelligence Functions
- Writing Contextually-aware DAX Expressions
- Calculating the Top 5 Products

Creating Calendar Table as Calculated Table

- ## Use **New Table** command in ribbon
- ## Create calendar table using DAX **CALENDAR** function
Adding Columns to Calendar Table

- Creating the **Year** column

- Creating the **Quarter** column

- Creating the **Month** column

Configuring Sort Columns

- Month column will not sort in desired fashion by default
  - For example, April will sort before January, February and March

- Creating a sort column for the **Month** column
  - **MonthSort** sorts alphabetically & chronologically at same time

  - Configure **Month** column with **MonthSort** as sort column

Columns for Month in Year and Day in week

- Creating the **Month in Year** column

Month in Year = FORMAT('Calendar'[Date], "MMMM")					
Date	**Year**	**Quarter**	**Month**	**MonthSort**	**Month in Year**
1/1/2012	2012	2012-Q1	Jan 2012	2012-01	January
1/2/2012	2012	2012-Q1	Jan 2012	2012-01	January

- Creating the **MonthInYearSort** column

MonthInYearSort = MONTH('Calendar'[Date])						
Date	**Year**	**Quarter**	**Month**	**MonthSort**	**Month in Year**	**MonthInYearSort**
1/1/2012	2012	2012-Q1	Jan 2012	2012-01	January	1
1/2/2012	2012	2012-Q1	Jan 2012	2012-01	January	1

- Creating the **Day of Week** column

Day of Week = FORMAT('Calendar'[Date], "dddd")							
Date	**Year**	**Quarter**	**Month**	**MonthSort**	**Month in Year**	**MonthInYearSort**	**Day of Week**
1/1/2012	2012	2012-Q1	Jan 2012	2012-01	January	1	Sunday
1/2/2012	2012	2012-Q1	Jan 2012	2012-01	January	1	Monday

- Creating the **DayOfWeekSort** column

DayOfWeekSort = WEEKDAY('Calendar'[Date], 2)								
Date	**Year**	**Quarter**	**Month**	**MonthSort**	**Month in Year**	**MonthInYearSort**	**Day of Week**	**DayOfWeekSort**
1/1/2012	2012	2012-Q1	Jan 2012	2012-01	January	1	Sunday	7
1/2/2012	2012	2012-Q1	Jan 2012	2012-01	January	1	Monday	1
1/3/2012	2012	2012-Q1	Jan 2012	2012-01	January	1	Tuesday	2
1/4/2012	2012	2012-Q1	Jan 2012	2012-01	January	1	Wednesday	3

Integrating Calendar Table into Data Model

- Calendar table needs relationship to one or more tables

Agenda

- ✓ Creating Dimensional Hierarchies
- ✓ Understanding Evaluation Context and Calculate
- ✓ Creating a Calendar Table
- ➢ Calling DAX Time Intelligence Functions
- • Writing Contextually-aware DAX Expressions
- • Calculating the Top 5 Products

Calculated Fields for QTD and YTD Sales
- TOTALQTD function calculates quarter-to-date totals
- TOTALYTD function calculates year-to-date totals

Creating Running Total using CALCULATE

- Calculate a running total of sales revenue across years
  - This must be done using **CALCULATE** function

```
Sales Revenue RT =
CALCULATE(
    SUM(Sales[SalesAmount]),
    FILTER(
        ALL('Calendar'),
        'Calendar'[Date] <= MAX('Calendar'[Date])
    )
)
```

Agenda

- ✓ Creating Dimensional Hierarchies
- ✓ Understanding Evaluation Context and Calculate
- ✓ Creating a Calendar Table
- ✓ Calling DAX Time Intelligence Functions
- ➤ Writing Contextually-aware DAX Expressions
- • Calculating the Top 5 Products

Sales Growth PM Measure - First Attempt

- Create a measure named Sales Growth PM

```
Sales Growth PM =
DIVIDE(
  SUM(Sales[SalesAmount]) -
  CALCULATE(
    SUM(Sales[SalesAmount]),
    PREVIOUSMONTH(Calendar[Date])
  ),
  CALCULATE(
    SUM(Sales[SalesAmount]),
    PREVIOUSMONTH(Calendar[Date])
  )
)
```

- Use measure in matrix evaluating month and quarter
  - Measure returns correct value when filtered by Month
  - Measure returns large, erroneous value when filtered by Quarter

Year	Quarter	Month	Sales Revenue	Sales Growth PM
2014	2014-Q1	Jan 2014	$629,969	-18.13 %
		Feb 2014	$609,637	-3.23 %
		Mar 2014	$628,618	3.11 %
		Total	**$1,868,225**	**142.79 %**
	2014-Q2	Apr 2014	$661,588	5.24 %
		May 2014	$748,193	13.09 %
		Jun 2014	$814,333	8.84 %
		Total	**$2,224,114**	**253.81 %**
	2014-Q3	Jul 2014	$788,469	-3.18 %

Using the ISFILTERED Function

- ISFILTERED function used to determine when perform evaluation

```
Sales Growth PM =
IF(
  ( ISFILTERED(Calendar[Month]) && NOT(ISFILTERED(Calendar[Date])) ),
  DIVIDE(
    SUM(Sales[SalesAmount]) -
    CALCULATE(
      SUM(Sales[SalesAmount]),
      PREVIOUSMONTH(Calendar[Date])
    ),
    CALCULATE(
      SUM(Sales[SalesAmount]),
      PREVIOUSMONTH(Calendar[Date])
    )
  ),
  BLANK()
)
```

- Expression returns Blank value when evaluation context is invalid
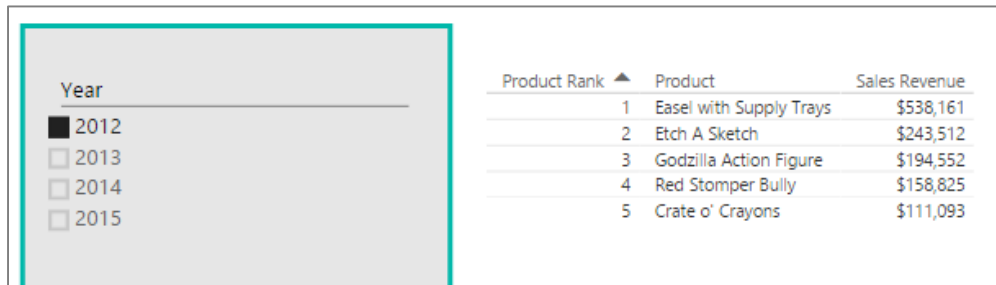

Year	Quarter	Month	Sales Revenue	Sales Growth PM
2014	2014-Q1	Jan 2014	$629,969	-18.13 %
		Feb 2014	$609,637	-3.23 %
		Mar 2014	$628,618	3.11 %
		Total	**$1,868,225**	
	2014-Q2	Apr 2014	$661,588	5.24 %
		May 2014	$748,193	13.09 %
		Jun 2014	$814,333	8.84 %
		Total	**$2,224,114**	
	2014-Q3	Jul 2014	$788,469	-3.18 %
		Aug 2014	$869,143	10.23 %

Problems with the Filter Context

- ## RANKX function is affected by filter context
  - ### Sometimes you get the results you are expecting

  - ### Sometimes you might get unexpected results

Writing Context Aware DAX Code

- ## When using RANKX…
  - It's recommended to call **HASONEVALUE** function
  - When calling ALL function, pass one or more columns

```
Product Rank =
IF(
  HASONEVALUE(Products[Product]),
  RANKX(
    ALL( Products[Subcategory], Products[Product] ),
    CALCULATE( SUM(Sales[SalesAmount]) )
  )
)
```

  - Ranking function now evaluates product ranking for specific Category

Year		Product Rank ▲	Product	Sales Revenue
☐ 2012		1	Twitter Follower Action Figure	$3,508,806
☐ 2013		2	Godzilla Action Figure	$2,970,735
☐ 2014		3	Captain America Action Figure	$855,607
☐ 2015		4	Spiderman Action Figure	$698,614
		5	Perry the Platypus Action Figure	$654,110

Category
- ■ Action Figures
- ☐ Arts and Crafts
- ☐ Remote Control Vehicles

Agenda

- ✓ Creating Dimensional Hierarchies
- ✓ Understanding Evaluation Context and Calculate
- ✓ Creating a Calendar Table
- ✓ Calling DAX Time Intelligence Functions
- ✓ Writing Contextually-aware DAX Expressions
- ➢ Calculating the Top 5 Products

Ranking Products By Sales using RANKX

- ## DAX provides RANKX function for ranking
  - ### Can be used to track top 5 products by sales revenue

```
Product Rank =
RANKX(
    ALL(Products),
    CALCULATE( SUM(Sales[SalesAmount]) )
)
```

  - ### You can sort and filter on output of RANKX function

Product Rank ▲	Product	Sales Revenue
1	Flying Squirrel	$3,828,783
2	Twitter Follower Action Figure	$3,508,806
3	Godzilla Action Figure	$2,970,735
4	Personal Commuter Chopper	$2,613,193
5	Red Stomper Bully	$2,538,233

Product Rank ⌃
is less than or equal t... ✎
Show items when the value:
is less than or equal to ⌄
5
⦿ And   ○ Or
⌄

Apply filter

More Ranking Evaluation Problems

- Adding new column to table creates new problem
  - Ranking run separately for each separate Product Image
  - Every product has unique Product Image and is given rank of 1

- ## Call to RANKX must be modified again
    - ### You must specify which columns to factor into ranking

    ```
    Product Rank =
    IF(
      HASONEVALUE(Products[Product]),
      RANKX(
        ALL( Products[Subcategory], Products[Product], Products[Product Image] ),
        CALCULATE( SUM(Sales[SalesAmount]) )
      )
    )
    ```

    - ### Context-aware DAX code corrects problems with visual

Product Rank ▲	Product	Product Image	Sales Revenue
1	Flying Squirrel		$3,828,783
2	Twitter Follower Action Figure		$3,508,806
3	Godzilla Action Figure		$2,970,735
4	Personal Commuter Chopper		$2,613,193
5	Red Stomper Bully		$2,538,233

Summary

- ✓ Creating Dimensional Hierarchies
- ✓ Understanding Evaluation Context and Calculate
- ✓ Creating a Calendar Table
- ✓ Calling DAX Time Intelligence Functions
- ✓ Writing Contextually-aware DAX Expressions
- ✓ Calculating the Top 5 Products
